

PRESS RELEASE

PRIMA INDUSTRIE AT THE METALWORKING 2002

April 29 – May 3, 2002

PRIMA INDUSTRIE presents its latest innovations for fast sheet metal processing (booth 3387, hall 3).

PRIMA INDUSTRIE will be present at the Metalworking 2002 in Birmingham with its new PLATINO HIGH SPEED for the fast sheet metal working.

The performances of this compact, fast and reliable 3-axis laser machine, that since its launch in 1996 has been satisfying hundreds of customers all over the world, have been considerably enhanced in the new model exhibited for the first time at the EMO 2001 in Hannover.

Speed and acceleration have been doubled: today PLATINO reaches 140 m/min with an acceleration of 12 m/sec². These results were also obtained thanks to the excellent performances of the new PRIMACH-20L, the latest CNC born in PRIMA ELECTRONICS. PRIMACH-20L has a very high processing speed and an ergonomic console, with 15" LCD flat screen, touch screen and integrated trackball.

The focal axis to automatically switch from different materials and thicknesses, the enhanced and faster automatic pallet changer and the PRIMA INDUSTRIE automation line, with which the machine can be easily integrated, make PLATINO HIGH SPEED the perfect tool for high productivity.
